

**Research.
Experiment.
Compete.
Succeed.**

Science projects prepare students for life.

As they study photosynthesis or develop a smartphone app, students working on science projects learn much more than science. That's why the Synopsys Science & Technology Outreach Foundation takes pride in providing students and teachers with the support they need to bring science to life...in the classroom and in competitions like the annual Synopsys Championship and sciencepalooza! science fairs. We know that whatever path these students take in life - artist, engineer, architect, teacher, or CEO - the skills they develop today will help ensure their success tomorrow.
